

AS350 Cargo Swing Frame

Applications & Benefits

This modification installs a cargo hook swing frame and restraint cables for external load operations with electrical and hydraulic mechanical release mechanisms.

Instead of a single hard point, our swing allows for greater external load to be carried and for greater range of motion and maneuvers with the external load.

The cargo swing is a welded steel frame secured to hard points under the landing gear by steel cables.

This mod can be installed in conjunction with Airbus Fixed Parts Service Bulletins.

Specifications

Certification:	NZCAA Modification OAL 114
Models:	AS350B, B2, B3, BA and D
Max Weight:	1400 Kg
Material:	Welded Steel & Steel Cable
STC:	NZCAA STC.OAL.010
Models:	AS350 B. BA, B1, B2, B3, D
